

In Brief

- ◆ Gateway Active Index-Option Overwrite Composite (the Composite) returned 2.21%, net of fees, in the second quarter of 2019 compared to 3.28% return of the Chicago Board Options Exchange (Cboe®) S&P 500 BuyWriteSM Index¹ (the BXMSM) and the 4.30% return of the S&P 500® Index.
- ◆ The Composite started the quarter strong, outperforming the BXMSM in April due to higher market exposure during the equity market's advance. During May and June, the Composite had relatively lower market exposure during significant market advances which ultimately led to its underperformance versus the BXMSM for the quarter.
- ◆ Trade policy and global growth concerns peaked in May when the equity market booked 2019's largest drawdown of 6.35%. The Federal Reserve (the Fed), however, helped appease investors with a renewed dovishness.
- ◆ Implied volatility exceeded realized volatility with Cboe® Volatility Index (VIX®) averaging 15.18 for the quarter while the annualized standard deviation of the S&P 500® Index was 11.51%. The BXMSM had an annualized standard deviation of 8.28%.
- ◆ Investors should contemplate the path forward and explore potential risks and rewards associated with uncertainty around global growth, monetary policy and trade policy. In particular, investors should consider the potential negative impact to both stock and bond markets if the Fed does not deliver the multiple rate cuts currently reflected in bond futures market prices.

Market Path & Implied Volatility

Source: Bloomberg, L.P. *The portfolio performance reflected for the Composite is that measured by a representative account. This information represents supplemental information to the GIPS-compliant presentation. This representative account was selected as it is the largest account in the Composite.

Market Recap

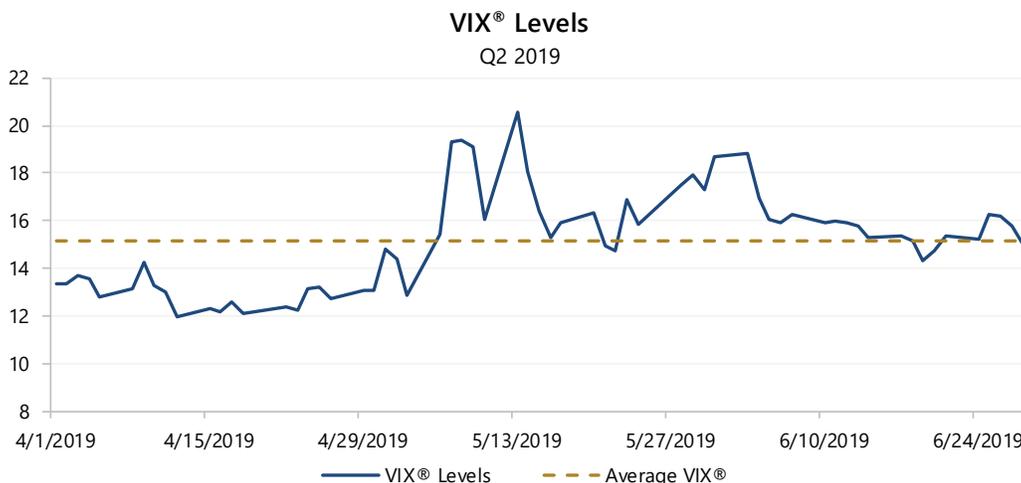

The S&P 500® Index weathered the storms in the second quarter of 2019 to return 4.30%, bringing its year-to-date return to an impressive 18.54%. The second quarter started strong with a 4.05% climb in April, digested 2019's largest monthly drawdown of 6.35% in May, then recovered by ending on a positive note with June's 7.05% return.

The second quarter faced a quagmire of concerns around trade policy and global growth. These issues percolated throughout the quarter but peaked in May as tensions between the U.S., China and Mexico ratcheted higher. The Fed was quick in its attempt to appease investors with a more dovish stance than originally portrayed heading into the quarter. As the Fed acknowledged slowing global growth and potential negative impacts on domestic growth stemming from trade tensions, investors appeared sufficiently encouraged and helped the S&P 500® Index resume an impressive climb to record highs.

On the domestic front, the third estimate of Gross Domestic Product growth for the first quarter of 2019 came in at 3.1%, in line with consensus expectations. Corporate earnings also remained positive with more than 81% of companies reporting first quarter earnings that met or exceeded analyst estimates and aggregate operating earnings for S&P 500® Index companies grew nearly 16% year-

over-year. The employment situation improved throughout the second quarter with the May unemployment rate declining to 3.6% from 3.8% reported in March. The May Consumer Price Index, released on June 12, showed a 1.8% year-over-year increase, in line with expectations yet below the 2% level targeted by the Fed.

Implied volatility, as measured by VIX®, averaged 15.18 for the quarter. VIX® exceeded S&P 500® Index realized volatility, as measured by its annualized standard deviation of daily returns, of 11.51% for the quarter. VIX® started the second quarter at 13.40, before drifting to its intra-quarter low of 12.01 on April 12, then peaked at 20.55 on May 13 before closing the quarter at 15.08.

Source: Bloomberg, L.P.

The BXMSM had a return of 3.28% for the second quarter of 2019. On the third Friday of each month of the quarter, the BXMSM wrote a new index call option as the option it wrote the previous month expired. The premiums the BXMSM collected on written options have significant influence on its return potential over a period when the market advances. Premiums collected as a percentage of the BXM'sSM underlying value were 1.17%, 1.43% and 1.38% in April, May and June, respectively. With monthly returns of 1.57%, -3.21% and 5.06%, the BXMSM underperformed the S&P 500® Index in April and June, while providing 314 basis points (bps) of downside protection in May. Premiums collected by the BXMSM did not provide enough return potential to keep pace with the above-average rate of return the equity market exhibited over the course of the quarter.

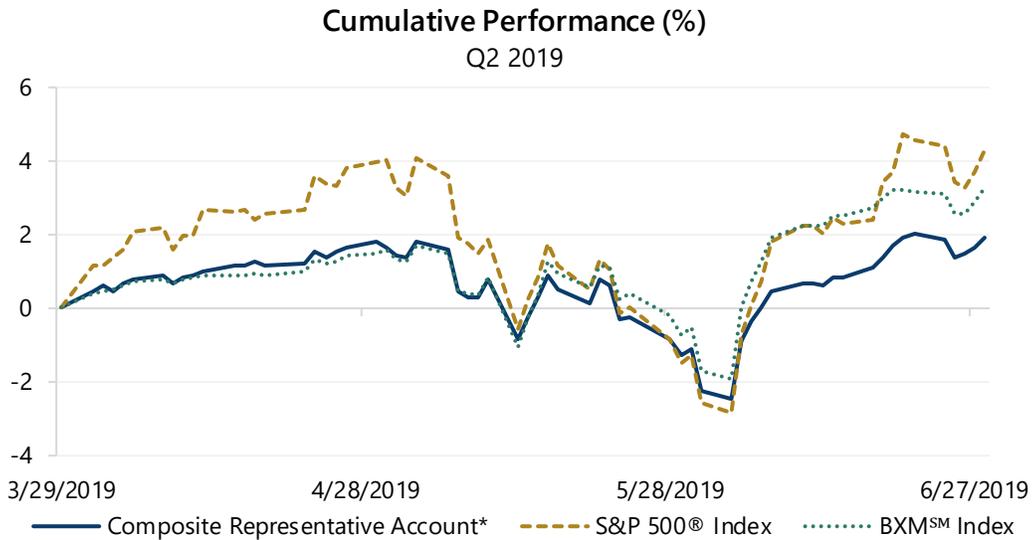

The Bloomberg Barclays U.S. Aggregate Bond Index increased an impressive 3.08% in the second quarter. The yield on the 10-year U.S. Treasury Note started the quarter at 2.50%, reached a high in April of 2.59%, then drifted lower to end the quarter at 2.01%. The low point of the quarter came near the end of June with a yield of 1.99%.

Gateway Active-Index Option Overwrite Composite Performance

The Composite returned 2.21%, net of fees, for the second quarter, trailing the BXMSM by 107 bps and bringing its year-to-date return to 9.60%. As equity markets climbed gradually in April, the Composite's active approach utilized longer-dated index call options than the single contract the BXMSM had exposure to for much of the month. More specifically, maintaining a call option portfolio with a relatively long time to expiration while raising call option strike prices as the market advanced allowed the Composite to earn more time premium, resulting in outperformance of the passive, rules-based approach of the BXMSM in April. As equity markets retreated in May, the Composite replaced select written index call options for contracts with lower strike prices to maintain typical market exposure as the market declined. This resulted in lower market exposure relative to the BXMSM during a brief but significant intra-month advance, resulting in the Composite's underperformance for the month of May. Similarly, the Composite's underperformance in June was primarily due to less market exposure than the BXMSM over the first three weeks of the month. May's market decline resulted in the BXM'sSM single written option being well out-of-the-money at the beginning of June whereas the Composite's portfolio of written options had a lower weighted-average strike price.

The portfolio performance contributions, annualized standard deviation and portfolio statistics quoted for the Composite in the following paragraphs are those measured by a representative account².

The Composite's underlying equity portfolio contributed a total return of 3.98% in the second quarter, slightly trailing the return of the S&P 500® Index. The Composite's index call option positions generated risk-reducing cash flow throughout the quarter while detracting from returns in the strong market advances of April and June, as expected. During May's market decline, the Composite generated gains from its written index call option portfolio which provided downside protection. The Composite's annualized standard deviation of daily returns for the quarter was 7.38% as compared to 8.28% for the BXMSM and 11.51% for the S&P 500® Index. The Composite exhibited a beta to the BXMSM and S&P 500® Index of 0.87 and 0.60 for the quarter, respectively.

Gateway’s investment team was active in their response to changes in market conditions and direction throughout the quarter. In periods when the equity market advanced, the team focused on exchanging index call options well in advance of their expiration dates for ones with later expiration dates and higher strike prices. This was in an effort to maintain a typical amount of equity market exposure and protect the Composite from the potentially adverse impact of a sharp reversal in market direction. As markets turned south during the middle of the quarter, the investment team took advantage of the relatively elevated volatility levels by making several index call option trades that increased potential cash flow while maintaining a typical risk profile.

At the end of the quarter, index call options were sold against over 95% of the equity portfolio’s value and had a weighted average strike price between 1.5% in-the-money and 1.5% out-of-the-money, 40 days to expiration and annualized premium to earn between 10.0% and 15.0%. Relative to the beginning of the quarter, this positioning represented similar potential net cash flow and market exposure.

Market Perspective

The first half of 2019 unfolded in a way few predicted coming into the year. The equity market not only recovered to new all-time highs in the second quarter, but it approached and even surpassed levels that many prognosticators had predicted for the full year. Meanwhile, in the bond market, falling interest rates and expectations of future rate cuts helped the Bloomberg Barclays U.S. Aggregate Bond Index deliver its best total return over the first half of a year since 1995.

Given the surprises thus far in 2019, what should investors expect going forward? There are few, if any, scenarios in which both stocks and bonds continue to deliver the very high returns of the last six months. In other words, what is good for stocks in the short-term is likely to be bad for bonds and vice versa. Furthermore, since strength in both markets has coincided with increasing expectations that the Federal Reserve will cut short-term rates in the second half of the year, downside risk in both markets may have increased.

As surprising as the first half returns of the stock and bond markets have been, the environment in which the returns have transpired makes them even more surprising. The strong returns of the equity market came despite a significant slow-down in the growth rate of corporate earnings. After growing at a rate of more than 6% in each of the first three quarters of 2018, S&P 500® Index operating earnings expanded at a rate of less than 1% in both Q4 2018 and Q1 2019 and are currently expected to grow less than 1% in Q2 2019. Slowing growth appears to be primarily a corporate phenomenon rather than a sign of broader domestic economic deterioration.

The bond market environment has changed dramatically over the last six months. After their December 2018 meeting, the Fed had prepared the market to expect two rate hikes in 2019. Market seers who had forecast low to negative returns from bonds based on the Fed’s outlook are, to this point, off by more than a country mile. The yield on the 10-year U.S. Treasury Note has defied both the Fed and market prophets by briefly falling below 2% during the second quarter, a mark that put it within spitting distance of all-time lows. Moreover, at the end of Q2 2019, futures market prices for the Fed funds rate reflected a 100% probability of at least one rate cut this year, with the first likely to come as soon as July. Futures pricing also reflected rising probabilities of additional cuts by year-end. Falling rates and strong bond market returns occurred despite robust Q1 2019 GDP growth, strong employment figures and an elevated Conference Board Leading Economic Index.

Looking forward, continued economic expansion may be necessary to support a reacceleration of earnings growth that would justify current market valuations and support a continuation of the robust equity market advance. However, this would likely put upward pressure on interest rates and lower the likelihood that the Fed could justify the multiple future rate cuts currently priced into futures

markets. Similarly, significant progress on trade policy, specifically between the U.S. and China, may benefit stocks but would also likely alleviate some of the concerns about a global economic growth slowdown that may have contributed to expectations of future rate cuts by the Fed. Conversely, if economic data begin to conclusively show that the domestic economy is deteriorating due to tariffs, slowing global growth or some other phenomena, the bond market may continue to rally. However, any or all of these developments would be negative for the stock market.

While it is difficult to envision scenarios that would allow both the stock and bond markets to simultaneously continue their high returns, there is a scenario with the potential to trigger a simultaneous retrenchment in both markets. If the Fed is unable to deliver on the rate cut expectations currently reflected in bond futures market prices, both stock and bond markets could potentially give back a substantial portion of their recent gains.

Investors may be compelled to attempt shifting money to the winning horse that has gotten out to a stronger than expected start. Gateway believes investors are best served by maintaining exposures that are consistent with their risk tolerance. Shifting portfolio allocation toward the asset class that is expected to do the best over the short term could result in exceeding risk tolerance, or unnecessarily lowering risk below tolerance. Gateway strategies, which combine equity exposure and index option-based cash flow to lower risk, are a potentially attractive middle ground for investors who see long-term opportunity in equities but shorter-term risks in both stock and bond markets.

VIX[®] ended the second quarter at 15.08. While this is below its historical average, it is notable because the S&P 500[®] Index was above 2900 and near its all-time high. VIX[®] ended the second quarter significantly higher than its reading the previous times the S&P 500[®] Index made new highs above 2900. Specifically, VIX[®] was 28% higher than it was at the market peak on September 20, 2018 and 17% higher than the peak on May 3, 2019. The implied volatility represented by VIX[®] is the vital component of strategies that write index options to lower the risk of equity market exposure. Higher VIX[®] levels result in higher cash flow from index option writing. Higher cash flow has the potential to translate into greater returns if the equity market advance continues. Increased cash flow can also provide improved protection if downside risk materializes in the equity market.

Gateway strategies have a long history of utilizing cash flow from option writing to achieve a lower risk profile than the broader equity market. Investors seeking to maintain their historical risk profile while reducing direct exposure to the potential risks of stock and bond markets may find a useful role for Gateway strategies in their diversified portfolios.

Important Information

All data as of 06.30.2019, unless noted otherwise.

1: The Cboe[®] S&P 500 BuyWriteSM Index (the BXMSM) is a passive total return index designed to track the performance of a hypothetical buy-write strategy on the S&P 500[®] Index. The construction methodology of the index includes buying an equity portfolio replicating the holdings of the S&P 500[®] Index and selling a single one-month S&P 500[®] Index call option with a strike price approximately at-the-money each month on the Friday of the standard index-option expiration cycle and holding that position until the next expiration.

Gateway Investment Advisers, LLC (Gateway) is an independent registered adviser and a successor in interest to Gateway Investment Advisers, L.P. as of February 15, 2008. Performance information for Gateway Active Index-Option Overwrite Composite (the Composite) shown in this illustration is an asset-weighted composite of discretionary accounts under Gateway's management which share the same investment objectives and hedging strategies.

The Gateway Active Index-Option Overwrite Composite was created on April 1, 2008.

The Composite's net of fee performance results reflect the reinvestment of dividends and other earnings and reflect the deduction of investment advisory fees.

The effectiveness of Gateway's strategy might be reduced if the portfolio doesn't correlate to the performance of the index underlying its option positions. Rebalancing of a portfolio may involve tax consequences.

Selling index call options can reduce the risk of owning stocks, but limits the opportunity to profit from an increase in the market value of stocks in exchange for up-front cash at the time of selling the call option. Unusual market conditions or the lack of a ready market for any particular option at a specific time may reduce the effectiveness of the Composite's option strategy, and for these and other reasons the Composite's option strategy may not reduce the volatility to the extent desired.

N/A: The three year annualized ex-post standard deviation of the Composite and benchmarks is not presented as 36-month returns are not available.

For all periods shown, the Composite has less than six accounts for the full year. As such, the Composite dispersion of portfolio returns is not applicable.

Gateway Active Index-Option Overwrite Composite contains fully discretionary hedged equity accounts that hold common stock and sell index call options on at least 95% of the underlying stock value. Indexes utilized for call option activity are U.S. domestic equity indexes that include all sectors of the economy. This call activity reduces volatility and provides cash flow. The Gateway Active Index-Option Overwrite Composite was created April 1, 2008.

For comparison purposes the Composite is measured against two indexes, the S&P 500® Index, a popular indicator of the performance of the large capitalization sector of the U. S. stock market, and, beginning January 1, 2014, the Cboe® S&P 500 BuyWriteSM Index (the BXMSM Index), a passive total return index designed to track the performance of a hypothetical buy-write strategy on the S&P 500® Index. The BXMSM Index was added as a secondary index as it is viewed to be representative of the Composite strategy.

Performance results are expressed in U. S. dollars. Returns are presented gross and net of actual management fees and include the reinvestment of all income. Past performance is not indicative of future results. The annual Composite dispersion, if applicable, is an asset-weighted standard deviation calculated for the accounts in the Composite the entire year.

Net of fee performance was calculated using actual management fees. The current investment management fee schedule is as follows: 0.85% on the first \$5 million; 0.65% on the next \$5 million; 0.50% on the next \$40 million; and 0.45% on assets in excess of \$50 million. Actual investment management fees incurred by Composite accounts may vary.

Gateway Investment Advisers, LLC (Gateway) is an independent registered investment adviser and a successor in interest to Gateway Investment Advisers, L.P. as of February 15, 2008. Gateway claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS® standards. Gateway has been independently verified for the periods January 1, 1993 through March 31, 2019.

Verification assesses whether (1) the firm has complied with all the composite construction requirements of the GIPS® standards on a firm-wide basis and (2) the firm's policies and procedures are designed to calculate and present performance in compliance with the GIPS® standards. The Gateway Active Index-Option Overwrite Composite has been examined for the periods April 1, 2008 through March 31, 2019. The verification and performance examination reports are available upon request.

Policies for valuing portfolios, calculating performance and preparing compliant presentations are available upon request. A list of composite descriptions is also available upon request.
